# FORKFUL PROG7314 FINAL POE

Mobile Presentation & Screen Demonstration Guide (Part 3)

**Presenter:** Isabelle Devlin (ST10445500) | **Time:** 5–6 Mins
**Group 1:** J. Abrahams, I. Devlin, J. Fussell, M. Nusca

🎯 **PART 2 LECTURER FEEDBACK 100% ADDRESSED** — Google SSO • Auto Token Refresh • Recipe Un-save • Strict Tokenised Pantry • Basket Edit • Backend CI/CD

| | | |
|---|---|---|
| **STEP 1**<br>0:00 – 0:45<br>**Intro & Google SSO** | **Screen:** Welcome screen. Tap **"Sign in with Google"**, select your account.<br>**Say:** *"Welcome to ForkFul by Group 1. Addressing Part 2 feedback, here is our live Google SSO authentication with automated JWT session refresh so users never experience silent session expiry."* | **LECTURER FEEDBACK PRIORITY**<br>Lecturer specifically marked down Part 2 for missing Google SSO demo. **Demonstrate this clearly first!** |
| **STEP 2**<br>0:45 – 1:45<br>**Mood Stack & Swiping** | **Screen:** Tap **"Healthy night"** stack. Swipe **Right** (save), then swipe **Left** (pass).<br>**Say:** *"Our recommendation deck uses explainable AI ('Why this is on top'). Right swipe saves the dish and populates missing items into our Basket. Left swipe records a pass in Supabase without looping."* | **USER DEFINED 1 FIX**<br>Proves left-swiped recipes are recorded in backend and do not keep coming back repeatedly. |
| **STEP 3**<br>1:45 – 2:30<br>**Saved Tab & Un-save** | **Screen:** Tap **Saved** tab (heart). Open the recipe, then tap the heart icon to **Un-save**.<br>**Say:** *"In Part 2, saved recipes could not be removed. We resolved this: tapping the heart un-saves the recipe instantly and syncs with Supabase in real time."* | **LECTURER FEEDBACK PRIORITY**<br>Directly satisfies: *"A saved recipe cannot be unsaved."* Show the item disappearing cleanly. |
| **STEP 4**<br>2:30 – 3:30<br>**Pantry & Matching** | **Screen:** Tap **Pantry**. Add "Garlic". Tap pencil icon to **Edit** quantity to "2 cloves".<br>**Say:** *"Users can now edit pantry items anytime. Crucially, we upgraded our matching engine from loose substring to strict word-token matching, so 'salt' will never falsely match 'salted butter'."* | **USER DEFINED 2 FIX**<br>Satisfies: 1) Pantry editing capability, 2) Strict word-token matching preventing false matches. |
| **STEP 5**<br>3:30 – 4:30<br>**Basket & Settings** | **Screen:** Tap **Basket**. Tap "+" to add custom item. Swipe to **Delete** an item. Open **Settings**.<br>**Say:** *"Our Basket menu button is fully functional. Items can be checked off, manually added, or removed. In Settings, we feature theme toggles, and logout safely preserves onboarding status."* | **USER DEFINED 3 & UI FIX**<br>Satisfies: working basket menu, manual item addition, item deletion, and non-buggy logout. |
| **STEP 6**<br>4:30 – 5:15<br>**Backend & CI/CD Demo** | **Screen:** Switch to laptop browser. Show **Supabase Dashboard** and **GitHub Actions** tab.<br>**Say:** *"Finally, here is our Supabase PostgreSQL backend with secure edge functions and sanitized filters, and our GitHub Actions pipeline passing all automated unit and UI tests."* | **LECTURER FEEDBACK PRIORITY**<br>Satisfies: *"No backend walkthrough"* & *"Automated testing not proven in video."* |

## VIDEO CHECKLIST (MUST SHOW)

6 KEY DEMOS

- ✓ Google SSO Live Sign-in
- ✓ Swipe Right & Left (No Loop)
- ✓ Edit Pantry Item & Token Matching
- ✓ Un-save a Recipe in Saved Tab
- ✓ Add & Delete Items in Basket
- ✓ Supabase + GitHub Actions CI Pass

## RECORDING BEST PRACTICES

- Enable **Do Not Disturb** & max screen brightness.
- Speak steadily at normal conversation pace.
- Small stumble? Just pause 1 sec and continue smoothly.
